

## CLAIMS

1. A patch-containing packaging pouch comprising: a packaging pouch; and a patch, housed within the packaging pouch, in which a pressure-sensitive adhesive layer is formed on one side of a support,  
5 wherein

the pressure-sensitive adhesive layer is formed of a pressure-sensitive adhesive composition containing a pressure-sensitive adhesive and bisoprolol or a pharmaceutically acceptable salt thereof, and

relative humidity inside the packaging pouch at 25°C is  
10 maintained at 25% or less.

2. The patch-containing packaging pouch according to claim 1, wherein the relative humidity is maintained at 10% or less.

3. The patch-containing packaging pouch according to claim 1 or 2, wherein a desiccant is further housed within the packaging pouch.

15 4. The patch-containing packaging pouch according to claim 3, wherein the desiccant is a desiccant formed of a substance which physically adsorbs moisture.

5. The patch-containing packaging pouch according to claim 3 or 4, wherein the desiccant is a desiccant formed of a porous substance.

20 6. The patch-containing packaging pouch according to any one of claims 3 to 5, wherein the desiccant is a desiccant formed of a porous substance formed of at least one type of material selected from the group comprising a metal oxide, zeolite and a clay mineral.

25 7. The patch-containing packaging pouch according to any one of claims 1 to 6, wherein the pressure-sensitive adhesive contains at least one type of compound selected from the group comprising a styrene-

isoprene-styrene block copolymer, polyisobutylene and an acrylic polymer.

5 8. The patch-containing packaging pouch according to any one of claims 1 to 7, wherein the packaging pouch has a blocking layer that blocks penetration of moisture.

9. The patch-containing packaging pouch according to any one of claims 1 to 8, wherein the packaging pouch has layer formed from polyacrylonitrile on the innermost side of said packaging pouch.
